Who should be vaccinated against the flu?

• The CDC recommends that everyone over 6 months old be vaccinated against the flu.

• It is especially important for people who are at high risk of developing complications from influenza be vaccinated. Those people include:
  - People with certain medical conditions including asthma, diabetes, and chronic lung disease
  - Pregnant women
  - People 65 years of age and older
  - It is also important for people who live with or care for others who are at high risk of developing complications, including the caregivers and contacts of the people mentioned above

Who can get the FluMist vaccine?

FluMist (LAIV), is a nasal spray flu vaccine, which is made from live, weakened flu viruses. Since the viruses are weakened, they cannot cause flu illness. It is only appropriate for healthy persons between the ages of 2 and 49, who are not pregnant.

The CDC recommends that people get vaccinated against influenza as soon as the flu vaccine becomes available in their community.

All flu vaccines given by THE BATON ROUGE CLINIC are preservative FREE.
